

### Authorization for Supplementary Molecular Testing

Your physician has referred you for a thyroid biopsy using a procedure called Fine Needle Aspiration (FNA). During this brief procedure, cells are removed from the thyroid using a thin needle, processed in the laboratory and examined by a pathologist. In the majority of cases (>90%), a diagnosis can be made from the examination of the cells alone. In about 10 percent of cases, additional molecular testing is recommended by the pathologist to determine if the nodule is benign, or if surgery will be recommended to remove the nodule. This test will not be sent out unless it is deemed necessary by the pathologist.

Unfortunately, molecular testing can be expensive. Insurance benefits for such services vary from company to company. You may be responsible for a deductible or coinsurance payment, depending on your personal coverage. Your doctor will advise you if this test is recommended. At that time, you should call your insurance company to determine your financial responsibility for this procedure. You will only be billed for this procedure if the specimen is sent out for testing.

Insurance companies have created a series of numeric codes, which are used by physicians to identify the procedures that have been done. You must ask your insurance company 1) if they cover this test; 2) if there is a copay; 3) how much money will be charged to your deductible. The following resources may be helpful in obtaining further information:

Test Name	CPT Code*	Patient Support Phone	Patient Support Website
Afirma	81545	1.888.9AFIRMA (1.888.923.4762)	<a href="http://www.afirma.com/patients/">www.afirma.com/patients/</a>
Thyroseq	0026U	1.877.225.7284	www.cblpath.com

\*Claims for this testing are submitted by the third party providers who perform the tests. They may use additional codes when submitting claims to insurance companies. The above codes are the main codes that are used.

**To avoid any surprise bills, we will not send out the specimen for molecular testing until this form is signed and returned to the CareMount Department of Pathology.** If you have any questions, feel free to discuss these with the physician at the time of your biopsy.

*I have read and understand the information contained in this document, and I authorize CareMount Medical to send my thyroid FNA specimen(s) for molecular testing.*
