

Healthcare That Revolves Around You.®

CareMount Medical strongly supports COVID-19 vaccination for all of its eligible patients. Hundreds of millions of people have been safely and successfully protected by becoming vaccinated. Widespread vaccination is the best way to get our world back to normal, and to keep your family safe.

The CDC, Society for Maternal Fetal Medicine, and the American Academy of Obstetricians and Gynecologists (ACOG) recommend that all eligible persons, **including** pregnant and lactating individuals, receive the COVID-19 vaccine. The only valid medical reason to not get COVID-19 vaccination is severe allergic reactions to the COVID-19 vaccines or their components. Our providers **will not be allowed** to provide anyone medical exemptions to vaccination for non-valid reasons. If you believe you may have a serious allergy to one of the COVID-19 vaccines, please consider seeing one of our allergists to explore this further.

CareMount continues to offer COVID-19 vaccination, including additional doses for patients with immune compromise. Starting September 20th, we will be offering booster doses as well. We will be sending out notices when you can sign up to receive your booster.
