

IMPORTANT INFORMATION TO PATIENTS

Today you received an injection of contrast with your procedure. Please be advised you **should not take** any of the following medications for 48 hours: **Avandemet, Fortamet, Glucophage, Glucophage XR, Glucovance, Glumetza, Metaglip, Metformin, and Riomet.** Our records indicate you may be on one of these medications.

Please contact your Physician to see if you need to take a different medication while you are off your regular medicine.

Also, you must have blood tests done to check your kidneys (BUN and Creatinine) before starting your medicine again. These tests must be done 48 hours after your procedure. We have ordered these tests for you. You may go to any CareMount Medical blood drawing location to have the tests done. After the blood tests your Physician will tell you when it is safe to restart your medicine.

Please contact your physician's office if you have any questions about managing your condition while you are off your medicine, or for any questions about when to restart your medicines.
